EDUCATION

University of California, Irvine

Expected Jun 2028

B.S. Informatics, GPA: 3.93

Irvine, CA

Relevant Coursework: Project Management, Human-Computer Interaction, Statistics, Database Management, AI Engineering, Software Engineering, Python, Java

EXPERIENCE

Technology Risk Management Intern

Jun 2026 – Aug 2026

Ernst & Young

Los Angeles, CA

- Scoped and shipped an internal AI agent (Microsoft Copilot Studio) after diagnosing a manual review bottleneck constraining engagement timelines, cutting evidence review from 10 hours to 2 per engagement (80%)
- Wrote requirements and acceptance criteria for evidence validation across 20+ controls, 9 applications, and 4 control domains for two \$15B+ clients, reconciling exceptions against stakeholder standards
- Ran 15+ walkthroughs across engineering, audit, and client teams, triaging requests and unblocking delivery

IT Consultant

Jul 2025 – Present

UC Irvine Samueli School of Engineering Computing Unit

Irvine, CA

- Shipped a Python GUI automating manual data entry after identifying a gap between staff workflows and tools
- Turned root-cause analysis of 15–20+ weekly tickets into prioritization recommendations that cut repeat incidents
- Owned data quality for a system of record spanning 200+ device and user accounts

Learning Assistant

Aug 2025 – Jan 2026

UC Irvine Donald Bren School of ICS

Irvine, CA

- Synthesized qualitative and quantitative feedback from 200+ students per quarter into recurring themes, reporting findings that informed instructor decisions on curriculum

PROJECTS

CloseSure | *Product Lead* | React, Tailwind CSS, JavaScript

- Led requirements discovery through 10 stakeholder interviews, prioritizing findings into a documented feature set that shaped the product roadmap for first-time homebuyers
- Directed a 3-person team through requirements validation, running 20-user acceptance tests and analyzing completion data to confirm the flow worked as scoped (100% task completion, 9/10 satisfaction)

Consistency | *Solo Product Build* | React, TypeScript, Supabase, Vercel

- Interviewed 10 beginner weightlifters to identify gaps in progress tracking, uncovering that manual 1RM-based recalculation in spreadsheets was frequently skipped, causing inconsistent programming
- Translated user research into product requirements and shipped an MVP (Figma to production via Claude Code) that auto-generates weekly weight targets, replacing the skipped manual step

Personal Finance Dashboard | *Solo Product Build* | Python, Streamlit, SQLite, Pandas

- Scoped a 4-module product from 10+ user interviews, prioritizing features around real transaction patterns and spending pain points uncovered in discovery
- Shipped data pipelines processing 100+ transactions over 4 months, using trend analysis and threshold alerts to cut user food spending by 50%

SKILLS

Product: User research, requirements and PRDs, roadmapping, prioritization, success metrics, A/B testing

Analytics: SQL, Python (Pandas, NumPy, Matplotlib), Excel, root cause analysis, trend analysis

Tools: Jira, Confluence, Figma, Git, SQLite, Microsoft Office Suite

Technical: React, Streamlit, TypeScript, JavaScript, Java, C++, HTML/CSS
